Version: 1.0 Final

1. Objective

Ensure comprehensive testing of **apo.vwo.com (VWO)** — an A/B testing platform — focusing on **functional accuracy, performance, usability, security, and compatibility**. This strategy aims to validate:

- User flows like login, dashboard access, sign-up creation, and A/B test configuration.
 - Business-critical operations to meet **technical and stakeholder expectations**.
-

2. Scope

In Scope:

- **Customer Workflows:**
 - User login/logout
 - Dashboard navigation & data display
 - Sign-up form creation
 - A/B test setup, variation management, and results reporting
- **Account Management:**
 - Profile updates
 - Password resets
 - Role/permission-based access
- **Integrations:**
 - Google Analytics
 - HubSpot, Segment
 - REST API endpoints for test data
- **Web & Mobile Web UI:**
 - Responsive testing on major screen sizes
 - Accessibility checks

Out of Scope:

- Native mobile app testing

- Internal analytics pipeline (non-UI/backend layer)
 - Payment integrations (not part of current workflow)
-

3. Focus Areas

Focus Area	Goal
Functional	Ensure all features work as intended across workflows
UI/Navigation	Validate clean, consistent, and user-friendly experience
Performance	Confirm system handles expected and peak loads without failure
Security	Check for vulnerabilities (OWASP Top 10, access control)
Compatibility	Cross-browser and cross-device validation
Usability	Ensure accessibility compliance and ease-of-use (WCAG 2.1 AA)

4. Test Approach

A. Types of Testing

- **Black Box Testing:** UI/UX, functional flow validation
- **White Box Testing:** Unit-level, DB query evaluation (via dev team)
- **Exploratory Testing:** Ad-hoc user behavior simulation
- **Automated Testing:**
 - Tools: **Selenium, Cypress, Postman (API)**
 - CI/CD: **GitHub Actions, Jenkins**
- **Load/Stress Testing:**
 - Tools: **JMeter, k6**
 - Target: 1,000+ concurrent users
- **Security Testing:**
 - Standards: **OWASP Top 10, SSL/TLS audit**
 - Tools: **OWASP ZAP, Burp Suite**
- **Cross-Browser Testing:**
 - Chrome, Firefox, Safari, Edge (latest 2 versions)
- **Usability Testing:**
 - Manual evaluation with **5–10 real users**

- Screen reader support (NVDA, VoiceOver)

5. Deliverables

- Functional Test Case Repository (TestRail)
- API Automation Suite (Postman)
- UI Automation Scripts (Cypress)
- Performance Reports (JMeter/Grafana)
- Security Audit Reports
- UAT Sign-off Sheet (Stakeholder Approved)
- Defect Reports (Severity-wise from Jira)
- Test Coverage Matrix (Req-Traceability)

6. Team & Schedule

Phase	Timeline	Testers Assigned
Functional Testing	May 6–May 24	3 QA Engineers
Security & API Testing	May 20–May 27	1 Security Engineer
Load & Performance	May 28–June 3	1 QA + DevOps
Cross-Browser & Usability	June 4–June 7	2 QA Engineers
Regression & UAT	June 10–June 14	3 QA + 2 BAs

7. Entry & Exit Criteria

Entry Criteria:

- Functional specifications and user stories approved
- Test environments are configured and stable
- Test data prepared for various user roles/scenarios

Exit Criteria:

- 100% test execution of all Priority-1 and Priority-2 test cases
- No open **Critical (P1)** or **High (P2)** defects
- UAT sign-off from business stakeholders
- All automated tests pass in CI/CD pipeline

8. Risks & Mitigation

Risk	Mitigation Plan
Delays in Dev Handoff	Parallel prep of test cases & data
Inconsistent Test Environments	Use Docker-based mirrors; nightly cleanup
Cross-browser rendering issues	Daily regression on BrowserStack
Test Data Volatility	Mock/stub data where possible
